

AUCKLAND 1995-2010

This listing arose out of a brief early in 2005 to compile “a list of publications in the last 10 years dealing with aspects of Auckland that geographers might be interested in - range across books, journals, theses, reports”. The list has been constantly updated with current material.

The following list is divided into three broad categories: human geography and environmental management, physical geography and environmental science, and the teaching of geography and environmental science. Within each category the arrangement is alphabetical by author.

Included are monographs, journal articles, theses, and research studies and projects where copies have been housed in the University of Auckland Library.

This bibliography is updated on a regular basis. Comments, and details of further items for inclusion, should be sent to Priscilla Cameron, Subject Librarian Geography & Environmental Science, Science Information Services, University of Auckland Library, email: p.cameron@auckland.ac.nz

Please note that you may use the binoculars symbol (left of screen) to enter a keyword and find items of particular interest.
