

Intellectual property

Key information for thesis writers

Research repository

PhD and masters students are required to deposit a digital copy of their thesis in the University of Auckland research repository. Masters theses are available to University members and PhD theses are able to be viewed by anyone in the world with access to the Internet unless embargoed. Once posted on the Internet your thesis is published for the purposes of the Copyright Act and you must ensure that you have permission to include other people's work in your thesis and make it publicly available online. For information about depositing your thesis in the repository see:

www.library.auckland.ac.nz/services/research-support/depositing-theses

Permission

It is important to consider copyright early on in your studies. Short quotes from academic works are unlikely to breach copyright. However if you include a whole work (photographs, graphs, diagrams, drawings, poems), or a substantial amount of a work in your thesis then you must get permission to reproduce it. For further information about permission see section 3.8 of the [Guide to Theses and Dissertations](#).

Performances

If you are intending to include a video or a sound recording of a performance in your thesis you need to get written permission from anyone who has contributed to the performance or the recording, as each holds copyright over their own work. This includes people like producers, directors, camera or sound operators, musicians, composers, actors, costume and set designers and dramaturges. You should ask each of them to sign a release form that states they give you permission to include their work in your thesis and have it held in the University's publicly available research repository. You do not need to get a release form signed if you have commissioned and paid a contributor to perform or record the work for you, but you should acknowledge their contribution in your thesis. For a sample release form see section 3.8 of the [Guide to Theses and Dissertations](#).

Patents

If you are doing research which may result in a patent application you must ensure your research remains confidential. A patent will not be granted unless the subject of the patent is novel and information about the patent has not been published prior to the grant of the patent. This means for example that you should not present your research at a conference or at a seminar where members outside your research group or collaboration are present. If you are unsure about whether or not to give that presentation double check with all your supervisors.

Publication

If you are publishing work such as a journal article or a book, or giving a conference presentation that you hope to later include in your thesis, you will need to ensure that either you retain copyright or a licence (or right) to include that work in your thesis. If you sign a publishing agreement that gives your copyright to the publisher you cannot use the work again without obtaining the publisher's permission. Two useful resources for authors on how to secure their rights to reuse a work which has been accepted for publication are:

- Scholarly Publishing and Academic Resources Coalition (SPARC)
www.sparc.arl.org/resources/authors/addendum
- Columbia Law School
<http://web.law.columbia.edu/keep-your-copyrights/contracts>

Joint ownership

A work of joint authorship will arise if you have collaborated with one or more persons to jointly create a work. Copyright in that work will be jointly owned with that person or persons. For it to be a work of joint authorship, the contribution of each author is not distinct from the other authors. This means you cannot copy or publish that work without the written permission of your co-author(s).

On-demand and predatory publishers

Once your thesis is made available online you may be approached by a publisher who offers to publish it as a book on a 'print on-demand' basis. Beware of print-on-demand publishers: the manuscript is not refereed as per standard scholarly practice neither do the publishers contribute any formatting or copy-editing normally associated with 'publishing'. Print on demand publishers may ask the University to remove your thesis from the research repository. It is important if you do proceed, you specify to the publisher that the University has a right to keep the *whole* digital version of your thesis on the website. For further information see: <http://scholarlyoa.com/2014/04/08/a-list-of-print-on-demand-publishers-self-publishingvanity-presses-and-other-non-traditional-publishers-for-librarians-and-authors/>

There are also a number of questionable open access publishers. If you are approached by a publisher you are unfamiliar with please check Beall's list of predatory publishers before submitting to these journals. <http://scholarlyoa.com/publishers/>
